

by the claimed generic formula:

H-X-(A-B)n-Y-Z

A = Trp, Phe or a peptide fragment consisting of 2 residues;

B = Trp, Phe, Asn or Glu;

X and Y = a bond or Asp, Glu, Arg, Lys, His or a peptide fragment consisting of 2-10 residues, provided that at least one of X or Y are present;

Z = OH or NH₂; and

n = 2-5.

These peptides may be immobilised on a carrier in the preparation of an adsorbing agent which may be used in the treatment of diseases related to anti-DNA antibodies and/or immune complex.

PT Peptides binding to the DNA binding domain of transcription factor E2F and inhibiting cell cycle progression, useful for the treatment of cancer

PS Claim 6; Page 2; 42pp; English.

CC Peptides which bind to the DNA binding domain of transcription factor E2F and inhibit cell cycle progression may be useful as research agents to investigate the interaction between E2F and DP-1, or the activation of transcription by E2F-1/DP-1 heterodimers. They may also be used for inducing apoptosis and/or cell cycle arrest in a cell, particularly for treatment of cancer or other proliferative disorders such as psoriasis and restenosis.
